    Method: MPage
    Value Impact: Quality
    Step Impact: Regulatory
    Regulatory Details: Inpatient Quality Reporting
    Comments: Data Element Name: Gestational Age
Collected For: PC-01, PC-02, PC-03 Definition: The weeks of gestation completed at the time of delivery. Gestational age is defined as the best obstetrical estimate (OE) of the newborn's gestation in completed weeks based on the birth attendant's final estimate of gestation, irrespective of whether the gestation results in a live birth or a fetal death. This estimate of gestation should be determined by all perinatal factors and assessments such as ultrasound, but not the newborn exam. Ultrasound taken early in pregnancy is preferred (source: American College of Obstetricians and Gynecologists reVITALize Initiative).

Within the OB Patient History form, the PPH Risk Assessment on

Cerner Workflow ID: 306 (v. 22.0)   Client Workflow ID: 1128   Last updated by Cynthia Skubel, Mar 07, 2025 2:10pm (UTC -5 hours)

Admission is included to document the patient's postpartum risk assessment upon admission in accordance with CMQCC recommendations. CMQCC recommends the PPH Risk Assessment be completed once upon admission and then at minimum once per shift until 24 hours post delivery. Assessments can be done more frequently as patient conditions may change during the course of stay.

Tracking Board event should complete upon signing of the OB Patient History PowerForm.

OB Patient History PowerForm may also be accessed via the Tracking Board toolbar, if needed.
