Work Step [56]
Description: Review updated notes from Addiction Counsellor

Document [61]
Description: Opioid Maintenance Documentation

Decision [64]

    Description: Is the patient being discharged from program ?

Decision [29]

    Description: Is the person still opioid dependent?

    Comments: "Opioid dependent" means that the person is still susceptible to experiencing acute withdrawal symptoms if their opioid medication were abruptly discontinued (e.g. without tapering). This is a physiological response to long-term of certain substances, including opioids, but does not inherently refer to addiction / substance use disorder (i.e. a person can be dependent and not be experiencing addiction).

Work Step [31]

    Description: Update the problem list if applicable to reflect that the person's opioid dependence is "resolved"

    Method: Problem List

Start/Stop [32]

    Description: Ensure opioid dependence is reflected on the problem list for the patient

    Method: Problem List

    Comments: This step is optional depending on organizational policy.

Work Step [78]

    Description: Complete prescription

Work Step [37]

    Description: Complete discharge order
